Dave and all: I am attaching our additions, in a redlined version, to the very good start on this survey of the landscape of ICAP deliverability. I won't be available for the phone call, but Frank Felder will try to catch a good part of the call for TransEnergyUS. I am on the road, so please use michael.jacobs@transenergicus.com for e-mail replies. Thanks. Mike Jacobs TransEnergyUS, Ltd. 110 Turnpike Rd, Suite 300 Westborough, MA 01581 508-870-9900 x 114

Folks,

Attached is an agenda for the ICAP deliverability conference call on Friday. To facilitate discussion, I have put together a very rough draft that identifies several of the major approaches and the concerns raised and concerns addressed by each. I would invite all folks participating to make comments clarifying each alternative as well as raising additional concerns or identifying other concerns that are addressed by each approach. If you have another approach, please submit it for the group's consideration. Thanks David Clarke Navigant Consulting 20 Madison Avenue Extension Albany, NY 12203-5326 phone: (518) 464-2705 fax: (518) 456-6008

File	campbell-l/inbox/1176.

Lou:

I talked with WGR (Phil Moyer and Jack Bates) and the TNRCC concerning the operating (Title V) permit issues at Gomez. Two Title V permits were applied for by NNG and issued for Gomez. Title V Permit No. O-00754 is for the gas processing operations and Permit No. O-00759 is for the compressor engines. I will draft a letter and prepare the appropriate TNRCC forms required to void Permit No. O-00754. The TNRCC forms will require Responsible Official signatures from Mike Nelson and Danny Pribble.

From: Soldano, Louis Sent: Thursday, December 20, 2001 8:48 AM To: Graham, Charlie; Child, Charles Cc: Campbell, Larry; Kendrick, William Subject: RE: WGR Responsibility for Gomez facility.

Charlie - yes the operating agreement from the summer of 1995 does require WGR to conduct all env activity. My guess is that there was an oversight but also that the TNRCC won't make an issue out of this.

Charlie (childs) - let us know what comes up. thx

-----Original Message-----

From: Graham, Charlie Sent: Thursday, December 20, 2001 8:39 AM To: Soldano, Louis; Child, Charles Cc: Campbell, Larry; Kendrick, William Subject: RE: WGR Responsibility for Gomez facility.

I received a call from WGR (Bruce Ports 303-450-8401) on Tuesday 12/18. Seems no permits were filed for the Gomez, Oates or Pikes Peak treaters (which were not running) during the period WGR was operating the plant for us. WGR did file title V paperwork and paid fees for the Gomez compression that was operating. Probably no harm since the plants weren't running, but may be a technical violation. Bruce asked me for some history of operation which I gave him verbally [i.e. Intratex (an Enron affiliate) operated for NNG prior to WGR]. One point I stressed, was that we believed the operating agreement obligated WGR to file any required environmental permits (with or without NNG reminding them) and that NNG was deliberate in not performing duties that WGR was paid to perform.

Charlie (Childs)- can you let Larry know if you need anything after to speak to Phil??? thx....

-----Original Message-----

From: Campbell, Larry Sent: Wednesday, December 19, 2001 4:01 PM To: Graham, Charlie; Soldano, Louis Cc: Kendrick, William Subject: WGR Responsibility for Gomez facility.

Guys, with respect to the above, as you know, WGR was responsible for all compliance submittals during the time that we owned and they operated. I know in the past, prior to their taking over ownership, I would remind them each year that a particular document was required. I figured that when they became owners, they didn't need me anymore. Louie, you are right, Phil Moyer was the environmental contact for WGR and he was the one I would contact and apprise. It just so happens that I have copies of previous annual submittals from WGR for the Gomez facility when the facility was under our ownership, their responsibility. I even have a copy of the Title V Permit. When I was told that we no longer owned the

facility, I sent all information I had to WGR, but kept copies of the stuff I had, just in case. I can send it one more time if you want me too. Let me know.....

** Proprietary **

Lou,

I received you phone message and fax. I tried to reach Larry Campbell on Friday morning, but got his voice mail which indicated he was traveling until Monday. I hope to talk with Larry on Monday about this matter.

You are correct that the legislature amended the Air Act this past session to include a statute of limitations governing enforcement actions. That amendment (H.B. 278) provides that "no action for civil penalty shall be commenced more than five years from the date the violation was known by the department or local agency." (to be codified at NMSA Sec. 74-2-12.1). The amendment became effective on June 15, 2001, the day after the NMED issued the compliance order here. NMED doubtless will assert that the limitations period is not applicable here because it was not in effect at the time they initiated the action by filing the Compliance Order. (Ah what a difference a day makes.) I will need to take a quick look to evaluate the strength of their position and our position that the limitations period should apply.

Charlie de Saillan used to be counsel to the New Mexico Natural Resources Trustee. He departed from that position nearly a year ago and, after short time off, went to NMED. He and Eric Ames are the two folks handling air issues these days. I have dealt with Charlie in the past. He is generally pleasant to deal with, but not always flexible in his views. My sense is that he will want to strike some kind of a deal to resolve this and is not likely to insist on pressing for the full \$15,000 per day for each day of violation. From your voice mail message, it sounds like NMED was advised of the change out of the engines. I will be curious to learn more about what they were told or provided in writing and when. I will flesh all that out with Larry when I speak to him.

I will be out of the office in the morning but will try to catch up with you and Larry as soon as I get in.

Nutcracker Tickets Fabulous seats for the final Nutcracker full dress rehearsal - including Founders' Box seats - are available for Wednesday, November 22, 7:30 p.m. at the Wortham Theater. Supply is limited, so buy your ticket soon for a first peak at the highlight of the holiday performance season. Tickets are only \$10! They're first come first serve and are available in EB 407.

Free Popcorn at Bring a book to the movies and get free popcorn! Enron's Prescription for Reading Book Drive is on Saturday, the Movies! November 25, noon to 4:00 p.m. Bring a new or gently used children's book to one of the following Cinemark Theaters on November 25. With your gift, you will receive a small popcorn to enjoy during the release of Disney's 102 Dalmatians, or any other great movie!

Cinemark 24 Westchase - 3600 Sam Houston Parkway Cinemark 16 - 12920 Northwest Freeway Cinemark 16 - Pasadena Cinemark 18 - 20915 Gulf Freeway

Enron's Prescription for Reading program, a Reach Out & Read program, is an early literacy intervention program that is implemented in pediatric healthcare clinics and targets children between the ages of 6 months and 5 years during their well-baby check-ups at UT-Houston facilities.

Big E Cafe - Don't be a Grinch this Holiday Season! Help spread the Holiday Cheer and give your time and effort back to December 1 the community. Come out to the Big E Cafe on Friday, December 1 from 11:30 a.m to 1:00 p.m. and check out the opportunities to sign up for community volunteer projects. Lunch is only \$5. Bring a toy, clothing item, or canned good and receive \$1 off lunch! Be sure to also check out information on the galleryfurniture.com bowl; you will receive a coupon for a free Chic-Fil-A sandwich with the purchase of a bowl game ticket at Big E! Entertainment will be provided by the Gary-Dahl Band, with special appearances by The Grinch!

Foley's Friday CHANGE HOUSTON 2000, a city-wide campaign benefiting SEARCH, will be at 14 Foley's locations around Houston Volunteers! on November 24 - the day after Thanksgiving. Volunteers are needed to help collect money, "cheerlead" shoppers to donate, and hand out information about SEARCH. This is an excellent opportunity for friends and family to get together during the biggest shopping day of the year and give back to the community. Please contact Stephanie Harris at 713-739-7752 ext.142 for more information. Come out and have a wonderful time!

MFA Volunteers for You are invited to the Museum of Fine Arts Corporate Partner Holiday Party on December 12 from 7:00 p.m. Holiday Party to 9:00 p.m, but volunteers are needed to help with fun and exciting preparations! The party is free for all corporate partner company employees and their families. In addition to helping out with face-painting, escorting guests, and assisting with photographers and Santa Claus throughout the night, the party features seasonal decor, holiday craft projects, and delicious desserts! Contact India Kerr-Perkinson at 713-639-7570 for more information and or [click here](#) to print out the volunteer form.

Enron Kids Holiday We still have a few students that need caring Enron sponsors! Come participate with Enron Kids, a program Fun! that helps provide books and equipment for schools in need. Sponsor a student or team up with co-workers or your department to provide a bag full of holiday cheer to an HISD Burrus Elementary student! A shopping committee can shop for you if your schedule does not give you the time. Sign-ups are:

November 14, 16, 17: 11:00 a.m. - 1:00 p.m. Sponsor Sign-Up in the Enron Building lobby November 15: 11:00 a.m. - 1:00 p.m. Sponsor Sign-Up in 3AC 601 November 15: 11:00 a.m. - 1:00 p.m. Sponsor Sign-Up in Jefferson Bldg. Ground Floor Conference Room

Gift drop-offs will be on December 4-8, and the holiday party for Enron Kids will be at Burrus Elementary on Thursday, December 14, with transportation available to sponsors. For more information, contact Geneva Davis at ext. 35517 or Leslie Campbell at ext. 35983.

Ceridian LifeWorks Celebrations. Travel. Traditions. Shopping. Expectations. Memories. With all the anticipation, and all your Helps Your Holidays! obligations at work and home, sometimes it can be hard to stop and really enjoy the holidays. That's why LifeWorks is here to help you. For some great tips, access LifeWorks by calling 800-635-0606 or visit LifeWorks Online at www.lifeworks.com (company id: enron, password: 2000).

Flu Vaccine The flu vaccine is scheduled to arrive before December 1. Due to its limited supply, you are encouraged to Update email your vaccine request as soon as possible to Health_Center@enron.com. You will be notified by email when the vaccine is available.

File	campbell-l/notes_inbox/768.

"Roy J. Shanker" <royjshanker@worldnet.att.net> writes to the NYISO_TECH_EXCHANGE Discussion List:

Not to be argumentative, but we all pay for studies done by the ISO for various purposes such as interconnect etc. The rules as I understand them is that things get posted and provided to everyone at the same time for all of these studies. If there is a policy or process that is outside of this structure that's fine, but I would like to know about it, and ask the ISO to explain how that works so others can avail themselves of the same opportunities for ISO studies that can be provided on an "advance" basis.

Roy J. Shanker 9009 Burning Tree Road Bethesda, MD 20817 301-365-3654 301-365-3657 FAX

"Roy J. Shanker" <royjshanker@worldnet.att.net> writes to the NYISO_TECH_EXCHANGE Discussion List:

As a separate item to the concerns I had about the technical content, I was a little confused on what was done here administratively. The last paragraph says something about NYPA sharing the study. I didn't think they had anything at all to say about it in the first place if it is an ISO work product. If they do, could you explain why this is the case? If the ISO did this, why wasn't this all posted on the OASIS at the same time NYPA got this? The date on this shows a March 26 release. Ignore these comments if this was done, but I wasn't aware of this.

I am more than a little uncomfortable with a single market participant having a month's lead time on ISO studies that can have significant commercial impact. Think about the implications of this in the context of people negotiating long term bi lateral ICAP agreements over the last month. Depending on your take on the type of market changes that this type of analysis might support, there could be enormous changes to the economics of seasonal versus annual agreements, choice of equipment etc. This simply isn't fair. Even if posted, this type of work by the ISO that can have large potential commercial impacts should go out on all of the distributions at the same time as release to anyone and OASIS posting.

Roy J. Shanker 9009 Burning Tree Road Bethesda, MD 20817 301-365-3654 301-365-3657 FAX
royjshanker@worldnet.att.net

-----Original Message-----

From: owner-nyiso_tech_exchange@lists.thebiz.net [mailto:owner-nyiso_tech_exchange@lists.thebiz.net] On Behalf Of Palazzo, William Sent: Monday, April 23, 2001 3:42 PM To: 'nyiso_tech_exchange@global2000.net' Subject: NYPA study-Winter Locational ICAP requirements

At NYPA's request ISO staff conducted a limited analysis of the winter locational ICAP requirements for Long Island and New York City areas. While such ICAP requirements have historically been set as a single number for the entire year, it is NYPA's belief that this holdover from the old way of doing business must be re-examined. It is NYPA's belief that most if not all of the contribution to loss of load risk occurs in the summer months. As such, some reduction in winter ICAP requirements should be possible with no impact on the Loss of Load criterion of one day in ten years.

NYPA requested that the ISO start with the database that resulted in the locational requirements of 80% and 98% for New York City and Long Island, respectively. At NYPA's request the ISO modeled winter ratings on the transmission interfaces into NYC and LI and determined how much the 80% and 98% could be reduced in the winter before any impact on the statewide Loss Of Load occurred. The report indicates that winter requirements of 75% and 92% of the summer peak load resulted for NYC and LI, respectively.

While this in no way reflects an exhaustive analysis of winter locational requirements, the results from this study suggest that some reduction in the winter requirement may be warranted and a consideration of seasonal requirements should be incorporated in future ICAP requirement studies. NYPA believes that having an ICAP requirement for summer and winter seasons based on the LSE's peak load for the respective season would send the proper ICAP price signal.

NYPA is sharing the study results in the attached report in an effort to begin a dialog which we hope will lead to a broader examination of locational requirements when the issue is revisited again next year. We would appreciate hearing the views of other market participants.

Marty Amati is requesting a Special BSP Subcommittee Meeting on Monday, August 13, 2001.

The meeting will be to consider and hopefully approve an Interim Credit Policy to support the Virtual Bidding Program.

In order to support implementation of the Virtual Bidding Program on November 1, 2001, it is Critical that the related Credit Policy in Support of Virtual Bidding be filed with FERC by August 31, 2001.

Following are the details for the meeting:

Date: Monday, August 13, 2001

Time: 9:30 AM until 1:30 PM

Location: NYISO - Albany Office 290 Washington Avenue Extension Albany, NY 12203

Conference Room: WA

A Call-In Number has been set-up for those of you who are unable to attend.

Dial In Number: (505) 242-2204

Participant Code: 756138

Please also reserve Friday, August 10, 2001 (9:30 AM until 1:30 PM) in your schedule in the event that this meeting can be held sooner. I will send a follow-up email to confirm the date of the meeting on Tuesday, August 7th.

Materials for this meeting will be provided prior to the meeting.

Coffee/ Muffins and Lunch will be provided. Please contact Denise DeChiaro at 518-356-6184 if you plan on attending so the appropriate food and space arrangements can be made.

Thank you, Denise DeChiaro 518-356-6184

Red Rock/DEQ: pre-permit construct

Sender	vwolf@swlaw.com
Recipients	[dan.pribble@enron.com', 'arnold.l.eisenstein@enron.com']
File	campbell-I/discussion_threads/469.

If the bottom line is being able to start critical construction activities as quickly as possible, rather than properly characterizing the type of permit revision, we have developed an argument, based on the Clean Air Act (which is the source for Arizona's air program), that would allow construction to commence shortly after notice, without the need for a permit. Of course, TWP has already submitted a permit revision application and would be willing to see this process through to completion as long as TWP could begin construction promptly and plan on beginning operation of the new equipment when the permit is finally issued, presumably in the spring.

The argument goes as follows: under CAA sec 502(b)(10), 42 USC 7661a(b)(10), a state program needs to allow changes within a permitted facility if the changes are not "modifications" and do not exceed the emissions allowable under the permit. A "modification" is defined as "any physical change in, or change in the method of operation of, a stationary source which increases the amount of any air pollutant emitted by such source or which results in the emission of any air pollutant not previously emitted."

Someone should confirm the technical status of the equipment changes and whether they meet the criteria. This may be something to point out to Nancy how she can exercise her discretion to get us where we need to go. Nancy can give this approval after Shudeish completes his calculations confirming TWP's netting calculations.

Van

From: Michael Jacobs [mailto:michael.jacobs@attglobal.net] Sent: Friday, September 07, 2001 8:09 AM To: dave_clarke@NavigantConsulting.com; BKranz@nyiso.com Cc: adesell@nyiso.com; scheije@selectenergy.com; cwnetlent@aesc.com; mdy@slater-consulting.com; gbfreeland@nyseg.com; mcadwalader@lecg.com; fafelder@erols.com; kevin_jones@NavigantConsulting.com; Laurie_Oppel@NavigantConsulting.com Subject: edits for ICAP Deliverability Task Force Conference Call

Dave and all: I am attaching our additions, in a redlined version, to the very good start on this survey of the landscape of ICAP deliverability. I won't be available for the phone call, but Frank Felder will try to catch a good part of the call for TransEnergieUS. I am on the road, so please use michael.jacobs@transenergieus.com for e-mail replies. Thanks. Mike Jacobs TransEnergieUS, Ltd. 110 Turnpike Rd, Suite 300 Westborough, MA 01581 508-870-9900 x 114

Folks,

Attached is an agenda for the ICAP deliverability conference call on Friday. To facilitate discussion, I have put together a very rough draft that identifies several of the major approaches and the concerns raised and concerns addressed by each. I would invite all folks participating to make comments clarifying each alternative as well as raising additional concerns or identifying other concerns that are addressed by each approach. If you have another approach, please submit it for the group's consideration. Thanks David Clarke Navigant Consulting 20 Madison Avenue Extension Albany, NY 12203-5326 phone: (518) 464-2705 fax: (518) 456-6008

File	campbell-l/discussion_threads/526.

Just to keep all permit information together, I spoke to Roger Kohn and he has sent to me the station 3 and 4 air permits. We are now free to initiate construction at these two sites....

"Van Wolf" <vwolf@swlaw.com> on 11/20/2001 01:59:21 PM

To: <arnold.l.eisenstein@enron.com>, <dan.pribble@enron.com>, <jerry.d.martin@enron.com>, <John.Shafer@ENRON.com>, <larry.campbell@enron.com>, <louis.soldano@enron.com>, <richard.melton@enron.com>, <ruth.jensen@enron.com>, <william.kendrick@enron.com> cc:

Subject: ADEQ permits: public hearing

As Larry has probably reported to you by now, the public hearing last night in Williams was accomplished with a satisfactory result. Shudeish had copies of the draft permits, which Larry reviewed and found satisfactory. Apparently, about three weeks ago, Prabhat Bargava left his DEQ position as Section Manager, Compliance, to take a position with a consultant, CH2M Hill, which is trying to start an air group in Arizona. I just spoke with Shudeish about how soon the actual permits will be issued. He said that DEQ had to wait a few days after the November 23 close of the comment period (this was announced at the hearing) to allow mailed comments postmarked on Friday, Nov 23 to reach DEQ. He then said that he expected both permits would be issued middle to end of next week (by Nov. 30): he said he had to blend the EPA issues into the permits, but that was not problematic. Larry talked with Shudeish last night about the EPA issues, and that did not seem to be any difficulty. I then asked Shudeish why the comment period was extended until Nov 23 when the rule states that the comment period is only 30 days long and the comment period opened by first publication on October 17. The public hearing also must be no sooner than 30 days after first publication, and that is why it was set for Nov. 19. Thus, even allowing for a couple of days after what should have been the close of comment period (Nov 19, because Nov 17 was a Saturday), the permits should be issued by the first of next week rather than the end of the week. Shudeish said he would check and get back to me. I know this is only a couple of days difference (assuming the permits are issued by Nov 30), but I am sensitive to Jerry's urgency to get moving quickly, and I also want to lay some groundwork to object if actual issuance starts dragging. Please let me know if you have any thoughts or comments. Van Wolf

Follow up items from Kevin Hyatt

Q: What are the Btu restrictions of gas being delivered to major California pipelines?

A: TW's tariff calls for minimum 970 Btu's per cubic foot. There is no maximum Btu value specified. The other qualification calls for " no hydrocarbons in liquid form at the temperature and pressure at which the gas is delivered into Transporter's pipeline system." TW's contract spec with SoCal reads the same way. I could find no contract spec for the PG&E or

Mojave contracts so the default is TW's tariff.

Q: Have any Calif. LDC's done any NGL peaking injection in the past?

A: I spoke with Mike O'Donnell, Director of Gas System Operations for PG&E. He recalls PG&E having some peaking equipment using NGL's on their system 10 - 15 years ago but nothing recent. They had a vaporizer (maybe several) situated on the lines as they came into San Francisco. He also recalled a vaporizer on a line that served a large electric power plant. Interestingly enough, a Canadian outfit had called him recently asking the same questions. Mike indicated they would be interested in talking more about the idea as we get further along

That's all for now, let me know if you have questions. Kevin Hyatt 713-853-5559

Following up from our conference call regarding our upcoming meeting on January 16th at 10:00 a.m. - here are travel and location details.

Our address and phone # - EOTT ENERGY Operating Limited Partnership, 111 W. Ocean Blvd., Suite 1700, Long Beach, CA 90802-4632. Phone 562.437.3577. Location - in downtown Long Beach at the Landmark Building on the corner of Ocean & Pine. Our offices are on the 17th floor and we'll hold the meeting in our conference room. Hotel - if your travel plans require overnight stay - we suggest the Renaissance Hotel. It is just across the street from our offices at 111 E. Ocean Blvd. Reservations can be made at 1.800.228.9898 or local number of 562.437.5900. Restaurants - there are many within short walking distance from the hotel and our office. Airports - You can fly into Los Angeles Airport (LAX) or Long Beach Airport. Both have shuttles and taxi service. Long Beach is 15 minutes away and LAX is 40 minutes away (normal driving time; shuttles take longer).

E-mail or call me at the number above if you have other questions and we'll try to help.

Rick - I would appreciate if you would forward this e-mail to anyone who was on the call and I missed as an addressee.

Thank you, Diane Corbett

Emissions	
Sender	john.march@rolls-royce.com
Recipients	[lcampbe@enron.com]
File	campbell-l/redrock_mainline_expansion/9.

Larry,

I am attaching a graph that shows how the CO emissions increase exponentially (vppm) as the turbine operating power is lowered. The 50% base load CO levels are between 215 and 250 vppm.

This graph also shows a wider ambient temperature range.

As stated on the phone today the 45 vppm NOx levels are achievable across the entire operating range.

I apologize for the SI units on the graph, but I ran out of time to convert the chart to imperial units, but hopefully it helps for you to understand the concept.

Call me at home this weekend, if you need anything.

-- John A. March, P.E. Market Manager Rolls-Royce Energy Systems, Inc. 105 North Sandusky Street Mount Vernon, Ohio 43050 U.S.A. Phone: 740-393-8391 Fax: 740-393-8781 Email: john.march@rolls-royce.com Home: 740-397-9187

Subject: Try Ananova.com for much coverage of today's terrorist incidents.

Sorry to impose on this list server, but many of us are involved in today's events. The following may be helpful and of interest to some of you.

My son Ruben E. Brown, a computer maven at Incert Technology that some of you know from NYISO meetings this Spring, has steered me to the Ananova.com website which has high powered servers covering the Terrorist situation with still relatively few hits. It is constantly feeding AP coverage and is updated much faster than the conventional US sites. Times are London times.

Public Water System Sampling Time Again

Sender	larry.campbell@enron.com
Recipients	['rick.smith@enron.com', 'team.gallup-sta4@enron.com', 'team.flagstaff-sta3@enron.com', 'david.roensch@enron.c...]
File	campbell-l/sent/160.

Sta.3, 4 and 5

As you may know, we are at the end of our grace period for not being required to do monthly sampling for the public water systems at sta. 3,4 and 5. Jeff Lobstein has been requested to do the monthly drinking water sample collections at each of the three compressor station and has three months completed. This memo is a reminder that each location is again required to send their drinking water analytical reports to the following agencies on a monthly basis as the analytical results are received at each compressor station.

Stations 3 and 4: each months reports are to be sent to the following 2 agencies:

Navajo Nation EPA P.O. Box 339 Window Rock, AZ 86515

Atten: Yolanda Barney Program Manager

US EPA Region IX 75 Hawthorne Street San Francisco, CA 94105

Atten: Danny Collier (WTR-6)

Station 5: your water sample reports are to be sent to the Navajo Nation EPA in Window Rock, AZ, only. In speaking with Charlie, he has indicated that he will be handling the reporting for Station 4 also.

I have contacted Nortest in Flagstaff (520) 774-2312, which is the lab selected to do the testing to send station 3 reports to station 3 and station 4 and 5 reports to station 5.

The Navajo Nation has been given primacy and will be taking over the drinking water program for the Navajo Nation in November of this year. Expect some changes in reporting. You may want to use MCS as a monthly reminder for the submittal of the reports. Questions, give me a call 505 625-8022..

File	campbell-l/discussion_threads/215.

As most of you are aware, a Consolidation Audit was performed at the NCL FRACTIONATOR during the month of November 2000 by a selected ENRON group. As a result of the audit, a task list was put together by the Audit Team, which identifies names & completion dates that were assigned to each task on the list.

Below is a file that has your name on it, this file has a list of Audit Action Items that you are responsible to complete. You must complete, and update me on each action item on or before it's assigned due date. You are also responsible for ensuring that the proper documentation supporting the completion of each action item is sent to me in a timely manner. If you have any problems with achieving completion of an assigned action item, you must report it to me as soon as possible. If you have any questions on anything, please do not hesitate to contact me. The completion of these items are extremely important and will require your full commitment. It is extremely important for you to download your file and begin on it immediately since some of the due dates are just around the corner. Some of the items will be easily taken care of, while others will take a lot of your time. Therefore, you will want to evaluate each item to identify how long it will take you to complete it.

Thank you for all of your help in advance,

Scott Jones P.O. Box 430 Tupman, CA 93276-0430

File	campbell-l/inbox/13.

-----Original Message-----

From: Bill C. Scott Sent: Tue 8/28/2001 5:14 PM To: Isoldano@enron.com; Melton, Richard Cc: Shafer, John; Jensen, Ruth Subject: NMED Compliance Order

**** Proprietary ****

Lou,

I attach a draft of a chronology of events concerning the P-1 compressor station matter.

I have tried to keep the chronology as short as possible. I have not included in this draft the dates that Transwestern applied for and received two modifications to the permit for the P-1. Transwestern applied for the first modification on July 26, 1996 to convert the P-1 from a regenerative cycle to a simple cycle and to include a 126 HP stand by generator. That permit modification was issued on February 21, 1997. Transwestern applied for the second modification on January 6, 1997. That application sought an increase in the horsepower of the facility from 2500 to approximately 3700 horsepower. NMED issued that amendment on September 8, 1997.

On the one hand , the fact that NMED issued the modifications is good for us because it shows that Transwestern properly and timely applied for modifications when it understood such action to be required and because it arguably shows that NMED did not see the May 1996 issue as being significant enough to prevent their issuing modifications to that permit. Including all of that material in the chronology, however, may 'muddy the waters" and may make the chronology less powerful. Let me know if you think we should include those events.

I look forward to your comments on this.

File	campbell-l/discussion_threads/1089.

Aaron Breidenbaugh <aaron@global2000.net> writes to the NYISO_TECH_EXCHANGE Discussion List:

Greetings,

I was surprised today to learn that MSWG is recommending a delay in the implementation of zonal price capped load bidding until the fall, when it can be implemented simultaneously with virtual bidding.

The priority assigned to zonal PCLB is a settled issue and one that is not properly before the MSWG or BIC at this time. The NYISO Management and Board have already determined that implementation of zonal PCLB by May is one of the ISO's highest priorities. Implementation of zonal PCLB by this summer is even part of the NYISO Business Plan, Goal and Objectives, and Incentive Compensation plan. In addition, the project prioritization process adopted by the Management Committee has ratified the priority assigned to this critical effort.

Apart from sporadic concerns raised by a few generators, there has never been any indication that zonal PCLB should be delayed until virtual bidding can be implemented. Indeed, it appears that the decision by the MSWG to advance this proposal was decided upon at the last meeting of the Virtual Bidding Task Force which does not even have official standing as a NYISO subcommittee. That meeting's material did not in any way indicate that such a major change was being contemplated, let alone that it would be a recommendation to the BIC less than a week later.

The Price Responsive Load Coalition strongly supports the ISO's previous decisions to implement zonal PCLB by this summer and views it as a critical component of the state's efforts to engage loads' participation in the market in a meaningful way. We will oppose any efforts to delay implementation simply because some generators raise speculative fears of "manipulation" of the markets by loads.

While there may well be merit to implementing zonal PCLB and virtual bidding simultaneously, the proposal now before us threatens to throw the baby out with the bathwater, depriving customers of one of their only means of ameliorating the effects of markets that may not be workably competitive.

From both a procedural and substantive perspective, the proposal presented to the BIC is fundamentally defective and must be rejected.

Sincerely, Aaron Breidenbaugh Executive Director Price Responsive Load Coalition --

Subject: Re: NSPS Calculation for Saturn 1200 -Reply

Rick, Attached is communications I have had with Solar on the Saturn turbine fuel consumption. The fuel rate Ms Leslie Witherspoon cites in her example below is the lowest I have seen from Solar for a Saturn turbine. I do not know for a fact whether her example is applicable to our operation.

I am making you aware that any of the calculations using Solar's data has exceeded the 10.7 gigajoule/hr limit as specified in 40 CFR 60.330 clause of the BNA's Subpart GG - Standards of Performance for Stationary Gas Turbines.

I was incorrect to say exceeding this fuel consumption would trigger PSD; per our conversation it only triggers a NSPS permit which accordingly is triggered anyway with the replacement of a Saturn turbine. Attached is the spreadsheet I forwarded to Ms Witherspoon.

Ken Young

Leslie H Witherspoon <Witherspoon_Leslie_H@solarturbines.com> on 02/01/2000 09:49:00 AM To: Kenneth Young/ET&S/Enron@Enron cc:

Subject: Re: NSPS Calculation for Saturn 1200 -Reply

In the NSPS formula the "STD" value is % by volume....

Therefore, you take your result, 0.015 % ppmv, and move the decimal two places to the left to represent ppmv. Result 0.00015 or 150 ppm.

Yes, the Saturn has a heat input high enough to trigger the NSPS regulation. This regulation however, has nothing to do with triggering PSD. I don't understand the connection you are making between NSPS, Subpart GG and PSD. Most states, including Kansas, have the delegated authority for NSPS.

All that is required by the standard is a performance test within 180 days of start-up and a record of the sulfur and nitrogen content of the fuel. In some cases, less testing is required.

Please let me know if this doesn't answer your questions. I feel that there may be some disconnect on what your strategy and how I'm assisting.

Leslie 619.544.2434

On Wednesday, I can be reached at 619.590.0552 all day.

Kenneth_Young@enron.com 02/01/00 04:21pm >>>

Leslie, Please review your calculations. I do not think $(14.4 / 14.4 \times 0.015)$ equals 150ppm.

This issue is not the tolerable limits of emission of the Solar Saturn. I feel this issue relates to a fuel flow limit which governs whether a Saturn falls under the 10.7 gigajoule limit prescribe by 40 CFR 60.330 clause of the BNA's Subpart GG - Standards of Performance for Stationary Gas Turbines. I have included a spreadsheet to illustrate my point. From your data a Solar Saturn consumes fuel at the rate of 10,864 BTU/HP.hr; my calculations show that this rate consumes fuel a rate about .5 gigajoule above BNAs limit, which may force us to apply for a PSD permit.

Please take time to review the spreadsheet and my comments, and if you see anything that needs correction, please advise.

(See attached file: Solar Saturn limits.xls)

Thanks Ken Young

Leslie H Witherspoon <Witherspoon_Leslie_H@solarturbines.com> on 01/26/2000 02:28:00 AM

To: Kenneth Young/ET&S/Enron@Enron cc: Leslie H Witherspoon <Witherspoon_Leslie_H@solarturbines.com> (IPM Return requested) (Receipt notification requested)

Subject: NSPS Calculation for Saturn 1200

Heat Rate at ISO conditions: 10,864 Btu/Hp-hr

$10,864 \text{ Btu/Hp-hr} \times 1055 \text{ J/Btu} / 745.7 \text{ w/Hp} / 1000 \text{ J/KJ} = 15.37 \text{ KJ/w-hr}$

Max denominator is 14.4 per the regulation

$14.4 / 14.4 \times 0.015 = 150 \text{ ppm}$

The regulatory limit is 150 ppm. We warranty the Saturn 1500 at 110 ppm. I would suppose that the 1200 had a similar warranty.

Please let me know if you need anything else.

It's a party invitation!

Sender	michael.garred@enron.com
Recipients	['suresh.guddanti@enron.com', 'geoff.guenther@enron.com']
File	campbell-I/notes_inbox/656.

My house is finally ready for its first party! Please join me for some cocktails, finger foods, music, and overall good spirits!

It's going to be Saturday, May 19 starting anytime after 6:00PM until Sunday 7:30AM. (That's when I go to church.) May 19 is not this weekend. It's next weekend.

I'll have a mix a domestic beers (including light), with some hard liquor, soft drinks, vegetable tray, and munchies. (Feel free to bring any 'specialized' booze that you may desire.) Join in me in the fun! Bring a friend.

Please RSVP so I can get an idea of how of you rapsallions will show up. Email me or call me at the phone numbers at the bottom.

What? Party at Mike's townhouse

Why? Any of the following reasons: The start of spring Celebration of your tax refunds To meet Moz and Josie, my 89-year old neighbor It'll be a great time

Where? On Bellefontaine Street, just South of the intersection of Buffalo Speedway and Holcombe. (Holcombe is the same street as Bellaire.)

Address? 3200 Bellefontaine #72 (Zip: 77025)

Directions: From 59-North Exit at Buffalo Spwy. Take right on Buffalo Spwy heading south. I live in the Grammercy Park complex. Grammercy Park is the first complex on the right-hand side of Buffalo Spwy immediately after the church (St. Vincent De Paul) on the corner of the intersection. You can park in the following places: A) on Bellefontaine Street, which is the first street south of Holcombe on Buffalo Spwy. B) in the church parking lot just before Grammercy Park. It's on the right hand side of Buffalo Spwy right after the Buffalo Spwy/Holcombe intersection. C) in the parking lot on the left-hand side of Buffalo Spwy by Blockbuster. You'll see balloons or something pointing you in the right direction when you get close. Look for garage with the # 72 over it. It's easy to find.

:From 59-South Exit at Buffalo Spwy. Take left on Buffalo Spwy heading south. I live in the Grammercy Park complex. Re: Eunice Gas Plant

Sender	george.robinson@enron.com
Recipients	['bret.reich@enron.com', 'larry.campbell@enron.com', 'louis.soldano@enron.com']
File	campbell-l/eunice_texaco_remediation/6.

We received preliminary sample results yesterday. Sample #1 (TPH = 97 mg/kg) and Sample #2 (TPH = 121 mg/kg) were collected from the east wall of the excavation about 2 feet outside the NNG facility fence and about 4 feet below ground surface. Sample #3 (TPH = 22400 mg/kg) was collected from the east wall of the excavation about 8 feet outside the NNG facility fence and about 8-10 feet below ground surface. There was little visual evidence that this soil sample was affected, but apparently it is.

In my discussions with Texaco's consultant, I inquired about their sample analysis plan. He indicated that they were submitting soil samples for TPH analysis by method 8015mod (GRO & DRO). I was concerned about comparing results from the 8015mod analysis to our older data generated by method 418.1. In light of this I submitted our samples for analysis by method 418.1. The 8015mod method is a more compound specific analysis than the 418.1 method and often the more appropriate method to use. However, in this case it may not be the most appropriate method. The 8015mod method is a GC method used to measure the mass of hydrocarbon compounds that will elute within specific time windows. The first time window is set up to measure the mass of gasoline range organics (GRO). The second time window is set up to measure the mass of diesel range organics (DRO). Any hydrocarbon compounds that elute after the DRO time window are not measured. This would not be an issue if the soil was contaminated with a light condensate, but Texaco's oil pit was reportedly used to accumulate liquids not suitable for feed stock to the plant. I think we can assume this meant heavy hydrocarbons. The 418.1 method is a less sophisticated method that measures petroleum hydrocarbon compounds over a wider range of carbon number, that is, it will measure the presence of heavier hydrocarbons that would not be measured using method 8015mod. In light of this, the 418.1 method is likely the more appropriate method for assessing soil affected by the Texaco oil pit, particularly when results are compared to older data generated using method 418.1.

I have requested our lab to confirm the results for Sample #3 using method 418.1. In addition, I have asked that they run the sample using method 8015mod (GRO & DRO) so that we can compare the two results. We should have these results later next week. I would like to get this additional information and discuss it among ourselves before we respond to Texaco. Right now I am inclined to say that the Texaco oil pit is neither implicated or cleared as the culprit of contamination found in NNG's monitor well MW-3.

Rolls-Royce RB211 expected emissions

Sender	john.march@rolls-royce.com
Recipients	['lorraine.whalley@rolls-royce.com', 'lcampbe@enron.com']
File	campbell-l/redrock_mainline_expansion/5.

Larry,

Please take a look at the attached excel file for the 7400 ft elevation. I have calculated both NOx and CO at 100% and 50% load.

If the CO emissions cause a problem, I can investigate with our engineering department to see if there is an on-engine control mechanism that can be employed.

Let's talk after you have had a chance to review.

Best regards,

-- John A. March, P.E. Market Manager Rolls-Royce Energy Systems, Inc. 105 North Sandusky Street Mount Vernon, Ohio 43050 U.S.A. Phone: 740-393-8391 Fax: 740-393-8781 Email: john.march@rolls-royce.com

Emission Reduction Credits (ERC's)

Sender	scott_jones@eott.com
Recipients	['larry_campbell@enron.com', 'edward_attanasio@eott.com', 'william_kendrick@enron.com', 'john_shafer@enron.com...]
File	campbell-l/discussion_threads/258.

Ed, As you are aware, we are currently looking for some ERC's to satisfy an Authority To Construct (ATC) for a methanol storage tank at NCL. We are looking for approximately 175 Lbs/Yr VOC credits to satisfy this ATC. While I was looking for credits on the APCD web sight @ valleyair.org, I came across a list of available VOC Credits that are being held by Aera Energy for the NCL gas plant (please see credits below), I asked Mark Poe about these credits and he has referred me to a Darryl Gunderson of Aera Energy. Mark informed me that he is the one that handles all of the ERC's and would be able to help me on this. I will contact Darryl on this issue ASAP and as we talked earlier, I am going to ask him if these credits should have been transferred to Koch during the acquisition of the NCL Gas Plant and if not I will see if we can purchase the necessary amounts to satisfy the ATC.

Ed, can you do me a favor and check the sales agreement between Arco & Koch to see if there is any mention of these credits. Also inform me ASAP whether or not to approach Darryl on these credits

Thanks, Scott

Response to TIE Question on EDRP Results

Sender	bkranz@nyiso.com
Recipients	['market_relations@nyiso.com']
File	campbell-l/inbox/889.

BKranz@nyiso.com writes to the NYISO_TECH_EXCHANGE Discussion List:

Matthew,

Accurate data detailing the response to activation of the Emergency Demand Response Program (EDRP) will not be available until we receive metered data from the Curtailment Service Providers. An updated EDRP program status will be written and posted on the NYISO website when this information becomes available in a few days. In the mean time, the NYISO has issued a press release that provides some preliminary information on the EDRP activation.

The press release can be found on the NYISO website at: <http://www.nyiso.com/topics/articles/index.html>.

Additional information on the NYISO's Demand Response Programs can be found at:
http://www.nyiso.com/services/documents/groups/bic_price_responsive_wg/demand_response_prog.html

Re: Sulfur Content Test Method

Sender	larry.campbell@enron.com
Recipients	['kohn.roger@epamail.epa.gov']
File	campbell-l/all_documents/592.

Roger, if EPA has approved other alternate methods for determining sulfur in fuel gas, can you approve of these for our sulfur methods? The reason I ask is that we are not set up to do any of the applications mentioned in Appendix D. We

have approved custom fuel monitoring schedules in place at 5 other compressor station locations and have been approved to use "stain tubes" or total sulfur analyzers. These were issued by Region IX and Region VI. I can send you copies of the approvals from the other Regions if that will help. If not, I would recommend that you write the permit with all the below referenced test methods and we will work out the details. Will it be possible to make a change to the permit after things quiet down a bit and we have more time to tailor the permit for you and us?

Kohn.Roger@epamail.epa.gov on 10/18/2001 05:54:40 PM To: Larry.Campbell@enron.com cc:

Subject: Sulfur Content Test Method

Larry,

I am going on vacation for two weeks - my last day will be Oct. 31, which is a little before the end of the comment period. I am doing everything I can to make sure the permits are ready to issue when the comment period ends. You have asked about using a sulfur analyzer. Since that is not typical practice for facilities subject to NSPS GG, I would have to research that. Frankly, if you want your permits ASAP, there really isn't time for that. Does one of the test methods in Appendix D of Part 75, which I've pasted below, work for you? (I know some don't.) Please advise so we can keep the process moving. Thanks.

2.3.3.1.2 Use one of the following methods when using manual sampling (as applicable to the type of gas combusted) to determine the sulfur content of the fuel: ASTM D1072-90, "Standard Test Method for Total Sulfur in Fuel Gases", ASTM D4468-85 (Reapproved 1989) "Standard Test Method for Total Sulfur in Gaseous Fuels by Hydrogenolysis and Radiometric Colorimetry," ASTM D5504-94 "Standard Test Method for Determination of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatography and Chemiluminescence," or ASTM D3246-81 (Reapproved 1987) "Standard Test Method for Sulfur in Petroleum Gas By Oxidative Microcoulometry" (incorporated by reference under 75.6).

RE: Summary of Progress

Sender	larry.campbell@enron.com
Recipients	['michael@pnge.psu.edu']
File	campbell-l/sent_items/95.

Thanks Michael for the brief update. it sounds encouraging. I am looking forward to putting the model into motion. No problem with signing the no cost extension for the project, send it my way.

-----Original Message-----

From: Michael Adewumi [mailto:michael@pnge.psu.edu] Sent: Thursday, November 29, 2001 1:15 PM To: Campbell, Larry Subject: Summary of Progress

Dear Larry: It was good hearing from you a few days ago. We are wrapping up a progress report on the project but I can tell you briefly what we have accomplished so far. We have finished the PCB model development/modification to incorporate most of the main ideas that we talked about when you, John and your crew visited us. Specifically, we have been able to extend the model significantly to include flow regime impact on cleanup efficiency and the amount of solvent that will be required. We have looked at the issue of contact time and contact area. These two and some of the other salient issues turned out to be more challenging to handle than we had originally anticipated but we have now nailed them. In fact, the new program finally worked well and debugged only about 2-3 weeks ago. Since then we have been doing shake-down testing and all is well so far. The results are exciting as you would see in the report. There are two tasks that we would now embark on. Now that the model has all the principal mechanisms incorporated, we are now planning a comprehensive production runs where we will give you cleanup options, etc with critical evaluations of those. That will

probably take us until the end of January. This is where I will need to talk to you very often to determine what options make most sense to run so that we do not just run millions of options. Along this line, we will need another no-cost extension letter from you so as to continue the work beyond December. We can talk about how long if you want so as to determine what you would really like to be the concluding point. So, I will call you after sending the report, which should be by Monday next week. Thanks and best regards.

File	campbell-I/all_documents/105.

Michael, our liquids data collections have been pretty lean. Its only been in the last couple of months where we have actually collected any arsenic data. I will send to you what data have have with respect to arsenic, including some historic reserch in the Abo field of southeast New Mexico where the arsenic is generated from down hole. The source is not so much from what is coming out of the wells (catalyst towers were installed in the late 80's to trap the arsenic) as the residual which has collected in the pipeline prior to the installation of the catalyst towers.....

"Michael Adewumi" <michael@pnge.psu.edu> on 02/23/2000 07:37:44 AM To: <lsoldano@enron.com>, <drosnc@enron.com>, "Michael Terraso (E-mail)" <Michael_Terraso@enron.com>, <larry.campbell@enron.com>, <echanley@enron.com>, <ebenson@enron.com> cc:

Subject: Penn State meetings

Gentlemen:

We should be concluding discssions today with regard to the contracting and scope of work issues for our project with Penn State. A number of data needs have been identified. Please review available information for the following:

Larry - Information related to arsenic - analytical/source informaiton. Last three months of analytical on liquids from the pipeline. We probably ought to pull together the liquids information from late 1998 to present. Sampling and lab protocols. Any Liquids composition analysis.

Earl - Station Three and Four Schematics, Alignment sheets (focus on Section 4 so we do not overwhelm the Professor's team). Gas composition analysis (primarily Needles).

Eric - please forward this to Ben Asante, Terry Gallassini, Frank Osborne and cc: Mike Nelson and Rich Jolly. Remind me to contact Neta on billing information/format to send to the Professor's team .

Ben and Terry - what modeling information/software can we share with Penn State??

Frank - Mike left you a message about contacting the Professor's team on the method by which we can transfer materials electronically rather than killing an entire forest for the paper copies. This is an engineering facility so they likely have similar capabilities to us.

We will follow up when we return.

Louie S. and David R.

The Professor's phone number is :

Michael A. Adewumi, Professor of Petroleum & Natural Gas Engineering, Department of Energy & GeoEnvironmental Engineering, The Pennsylvania State University, 202 Hosler Bldg., University Park, PA 16802 (814) 863-2816 (814)

BIC ISSUES RAISED WITH PJM INTERACTIONS

Sender	owner-nyiso_tech_exchange@lists.thebiz.net
Recipients	['nyiso_tech_exchange@global2000.net', 'cking@nyiso.com']
File	campbell-I/discussion_threads/1369.

"Roy J. Shanker" <royjshanker@worldnet.att.net> writes to the NYISO_TECH_EXCHANGE Discussion List:

Chuck, please see that this gets on the appropriate distributions lists, TIE and BIC.

In thinking over the discussions at the BIC meeting I found two areas related to interactions with PJM where I am a bit confused due to what is either my misunderstanding, or conflicting information provided by NY and PJM. I would appreciate it if the NYISO would clarify these items. I will also make a similar request of PJM.

1) Common interface tool.

My understand from the PJM EMC meeting was that PJM was going basically do this entirely (or almost entirely) on their own, and just allocate some costs between NY and PJM. The product as I understood it would be available to participants of both pools for transactions scheduling. The users would input to the tool, and NY and PJM would basically get screened/coordinated input simultaneously in order to accelerate scheduling and minimize checkout problems etc.

If this was the case, I don't understand the comments at the BIC that NY wont be able to do this by the summer. Is this a PJM or NY constraint? Is PJM unable to complete what they offered? I can understand that that would hold things up as they proposed to do most of the work. However at the PJM EMC I got the impression that PJM was all set to go, could make the schedule, and just needed NY agreement. If this is a NY constraint I would also like to know more about it.

Can you please clarify what is going on here?

2) Inter ISO Congestion Pilot. I was disappointed in the "lukewarm" presentation that Rick Gonzales made at the BIC. I realize that this program is very limited in scope, but it seems to me this is a very important precedent to the future coordination of the ISO's. As we left things it seems likely that this will die in committee before the summer.

However, I would like a technical explanation of one of things that Rick said. He commented that one of his discomforts related to a request by PJM that NY pay for some generation in Northern New Jersey. At first blush this got a very negative response in the group.

Then I started to think about this more. My understanding is the basic structure of the agreement is that ISO A only makes payments to ISO B if B is taking an action such as re-dispatch to ease a constraint in A. Thus if PJM was suggesting NY pay for North Jersey generation, presumably this was to be for PJM adding generation there to ease a NY constraint. Now I am not a great electrical engineer, but my limited understanding of the systems suggests to me that if PJM is adding generation in North Jersey to help NY, this has to do with modification to the PAR flows and support of SENY through the PSEG cable. Is this correct?

IF CORRECT, DOES THIS MEAN THAT THE NYISO HAS REJECTED A PROPOSAL TO INCREASE SUPPLIES TO SENY FOR THIS SUMMER BECAUSE THEY WOULD HAVE TO PAY FOR REDISPATCH IN PJM?

I hope that this is an incorrect conclusion, otherwise we have some big problems.

I would appreciate a further explanation of this, as perhaps I don't understand what is physically happening.

Thanks for the help

Re: The Draft of the PCB Cleanup Proposal

Sender	larry.campbell@enron.com
Recipients	['louis.soldano@enron.com', 'rick.cates@enron.com', 'michael.terraso@enron.com', 'david.roensch@enron.com', 'b...]
File	campbell-l/pg_e_pcbs/24.

Mike, I reveiwed the proposal by Adewumi and it is correct and fairly accurate, for the purposes of a historic account and in as far as what was provided to him in the way of data and history. His proposed scope seems to be conclusive and appears to be what we need. I have included Louie in the distribution and am sure he will have some input.

My comments are as follows:

1. I dont know how relevant it is to know about the customers facilities at this time. As you know, we have more than one customer (PG&E and SoCal), and I think that we should maintain a low profile especially with respect ot SoCal. Both parties in the past, have been helpful and very cooperative in matters pertaining to PCB's. Because the modeling study will be conducted between C/S 3 and C/S 2, the customers facilities should have no impact on this.

2. Also, I would like to see if we can deal with PCB's and arsenic at the same time? Is it possible to simultaneously model both contaminants?

3. Because the modeling efforts are conducted on a very small portion of the pipeline, can this section be used for all of the Transwestern system? In leau of the fact that we have pipe under rivers, over rivers, major elevation chages in short distances etc which are not covered in the section to be modeled, will the pipeline characteristics be covered to the extent that it will yeild information applicable to the entire pipeline system?

4. I am also concerned about stirring up the PCB's and moving additional PCB's into the SoCal system. Its been pretty quiet in discussions with the SoCal PCB person. I wonder if we should notify Ralph Komai to be on the alert when we start the cleaning? Louie, thoughts?

5. Injection of terpenol into the station yard piping. How will we do this and how do we get it out?

6. Impact of terpenol on gaskets, engine parts, etc.

"Michael A. Adewumi" <michael@pnge.psu.edu> on 10/29/99 03:15:19 PM To: Michael Terraso/OTS/Enron@ENRON, David Roensch/ET&S/Enron@Enron, Larry Campbell/ET&S/Enron@Enron, Ben Asante/ET&S/Enron@ENRON cc:

Subject: The Draft of the PCB Cleanup Proposal

Dear Mike, David, Larry and Ben: Please find attached the draft of the PCB migration/cleanup proposal as promised. This is only the technical portion of the proposal. Once we agree on the specific scope of the work, the necessary man-hours and the associated budget can then be developed. In addition, we have studied the material given during our meeting and have developed a preliminary list of the data that we would need from you once the project begins. I have decided to attach the list so as to give you adequate time to collect and/or collate this information. Please give me your feedback on the proposal as soon as possible so that we can develop the final version and submit an official proposal. Equally important, the more preparation and planning we do at this stage, the faster the progress that would be made once the project actually begins. Thank you and have a wonderful weekend. Michael A. Adewumi, PhD., Professor of Petroleum & Natural Gas Engineering, Department of Energy & GeoEnvironmental Engineering, The Pennsylvania State University, 202 Hosler Bldg., University Park, PA 16802 (814) 863-2816 (814) 863-1875 (FAX)

CONFIDENTIAL - Enron Corporation Internal Records - Reconstructed for Research Purposes

NYPA requested that the ISO start with the database that resulted in the locational requirements of 80% and 98% for New York City and Long Island, respectively. At NYPA's request the ISO modeled winter ratings on the transmission interfaces into NYC and LI and determined how much the 80% and 98% could be reduced in the winter before any impact on the statewide Loss Of Load occurred. The report indicates that winter requirements of 75% and 92% of the summer peak load resulted for NYC and LI, respectively.

While this in no way reflects an exhaustive analysis of winter locational requirements, the results from this study suggest that some reduction in the winter requirement may be warranted and a consideration of seasonal requirements should be incorporated in future ICAP requirement studies. NYPA believes that having an ICAP requirement for summer and winter seasons based on the LSE's peak load for the respective season would send the proper ICAP price signal.

NYPA is sharing the study results in the attached report in an effort to begin a dialog which we hope will lead to a broader examination of locational requirements when the issue is revisited again next year. We would appreciate hearing the views of other market participants.

Draft Permits and SOBs

Sender	kohn.roger@epamail.epa.gov
Recipients	['larry.campbell@enron.com']
File	campbell-l/redrock_mainline_expansion/56.

Larry,

I faxed you the cover letter. The draft permits and statements of basis should appear on the website within two hours. And I have attached the four files in PDF format. Call if you have questions. Thanks.

(See attached file: leupp mod draft.pdf)(See attached file: klagetoh mod sob draft.ps.pdf)(See attached file: klagetoh mod draft.pdf)(See attached file: leupp mod sob draft.pdf)

Roger Kohn U.S. EPA Region 9 75 Hawthorne St., Mail Code AIR-3 San Francisco, CA 94105 phone: (415) 744-1238 fax: (415) 744-1076

Larry.Campbell @enron.com To: Roger Kohn/R9/USEPA/US@EPA cc: 10/03/2001 Subject: Re: Example of Word perfect Document 03:06 PM

Roger, I printed the Calpine permits and everything worked fine. Am looking forward to seeing my permits. Any idea as to when they will be placed on the EPA website? The reason I ask is that I need to travel to Flagstaff Az and cant go untill I make copies of the Sta 3 and 4 permit drafts. Roswell to Flagstaff is 500 miles. Whatever you can do will really help.

Kohn.Roger@epamail.epa.gov on 10/03/2001 12:00:48 PM

To: Larry.Campbell@enron.com cc:

Subject: Re: Example of Word perfect Document

Larry,

Actually, I'm going to post the draft permits and SOBs on our website. I think you'll have everything you need there. If for some reason you don't like the way that looks or prints, I will send you files. To see an example, go to:
<http://www.epa.gov/region09/air/permit/epssdata.htm>

Then click the first yellow bullet and drill down through CA and Monterey and click on Calpine. At the bottom of the form you will see yellow icons. Click on the one in the field labeled "link permit conditions".

I will fax you our cover letter as soon as it's signed today. Please e-mail me your fax number. Thanks.

Larry.Campbell @enron.com To: Roger Kohn/R9/USEPA/US@EPA cc: 10/03/2001 Subject: Example of Word perfect Document 09:55 AM

Roger, to be sure I have all the right tools for your rough draft submittal of the permits for compressor stations 3 and 4, please send me soemthing in Word perfect so that I can open and view. I can open a PDF file so you might want to send it that way as you suggested. I hope that this message isnt repetitive, as my email has been messed up and some of the stuff Ive sent, hasnt made it to the intended person or agency.

Thanks Larry for passing this along. This is good news, if in fact the good doctor has isolated the solvent contact time (so the solution has maximum effectiveness as the entrained pigs apply it to the walls of the pipe). That was one of the issues that bothered me most about the effectiveness of an application. Would the solvent be uniformly applied and in the proper timeframe so that the PCB's would be absorbed and transported to an pre-determined extraction point? It sounds like the model is ready. After you receive the report and if you agree, I would be willing to discuss with Louie another no-cost extension. John

FYI from Penn State on the progress of the model to remove PCB's from Transwetern's pipeline.

-----Original Message-----

From: Michael Adewumi [<mailto:michael@pnge.psu.edu>] Sent: Thursday, November 29, 2001 1:15 PM To: Campbell, Larry Subject: Summary of Progress

Dear Larry: It was good hearing from you a few days ago. We are wrapping up a progress report on the project but I can tell you briefly what we have accomplished so far. We have finished the PCB model development/modification to

incorporate most of the main ideas that we talked about when you, John and your crew visited us. Specifically, we have been able to extend the model significantly to include flow regime impact on cleanup efficiency and the amount of solvent that will be required. We have looked at the issue of contact time and contact area. These two and some of the other salient issues turned out to be more challenging to handle than we had originally anticipated but we have now nailed them. In fact, the new program finally worked well and debugged only about 2-3 weeks ago. Since then we have been doing shake-down testing and all is well so far. The results are exciting as you would see in the report. There are two tasks that we would now embark on. Now that the model has all the principal mechanisms incorporated, we are now planning a comprehensive production runs where we will give you cleanup options, etc with critical evaluations of those. That will probably take us until the end of January. This is where I will need to talk to you very often to determine what options make most sense to run so that we do not just run millions of options. Along this line, we will need another no-cost extension letter from you so as to continue the work beyond December. We can talk about how long if you want so as to determine what you would really like to be the concluding point. So, I will call you after sending the report, which should be by Monday next week. Thanks and best regards.

File	campbell-l/notes_inbox/770.

"Palazzo, William" <William.Palazzo@nypa.gov> writes to the NYISO_TECH_EXCHANGE Discussion List:

In response to Roy's comments. NYPA is paying for all the work conducted by the ISO staff. NYPA defined the study objective and all the ISO staff did was conduct the MARS studies and document the results in the write-up we provided to the tech exchange.

-----Original Message-----

From: Roy J. Shanker [mailto:royjshanker@worldnet.att.net] Sent: Tuesday, April 24, 2001 7:35 PM To: market_relations@nyiso.com; nyiso_tech_exchange@global2000.net Subject: RE: NYPA study-Winter Locational ICAP requirements

"Roy J. Shanker" <royjshanker@worldnet.att.net> writes to the NYISO_TECH_EXCHANGE Discussion List:

As a separate item to the concerns I had about the technical content, I was a little confused on what was done here administratively. The last paragraph says something about NYPA sharing the study. I didn't think they had anything at all to say about it in the first place if it is an ISO work product. If they do, could you explain why this is the case? If the ISO did this, why wasn't this all posted on the OASIS at the same time NYPA got this? The date on this shows a March 26 release. Ignore these comments if this was done, but I wasn't aware of this.

I am more than a little uncomfortable with a single market participant having a month's lead time on ISO studies that can have significant commercial impact. Think about the implications of this in the context of people negotiating long term bi lateral ICAP agreements over the last month. Depending on your take on the type of market changes that this type of analysis might support, there could be enormous changes to the economics of seasonal versus annual agreements, choice of equipment etc. This simply isn't fair. Even if posted, this type of work by the ISO that can have large potential commercial impacts should go out on all of the distributions at the same time as release to anyone and OASIS posting.

From: owner-nyiso_tech_exchange@lists.thebiz.net [mailto:owner-nyiso_tech_exchange@lists.thebiz.net] On Behalf Of Palazzo, William Sent: Monday, April 23, 2001 3:42 PM To: 'nyiso_tech_exchange@global2000.net' Subject: NYPA study-Winter Locational ICAP requirements

At NYPA's request ISO staff conducted a limited analysis of the winter locational ICAP requirements for Long Island and New York City areas. While such ICAP requirements have historically been set as a single number for the entire year, it is NYPA's belief that this holdover from the old way of doing business must be re-examined. It is NYPA's belief that most if not all of the contribution to loss of load risk occurs in the summer months. As such, some reduction in winter ICAP requirements should be possible with no impact on the Loss of Load criterion of one day in ten years.

NYPA requested that the ISO start with the database that resulted in the locational requirements of 80% and 98% for New York City and Long Island, respectively. At NYPA's request the ISO modeled winter ratings on the transmission interfaces into NYC and LI and determined how much the 80% and 98% could be reduced in the winter before any impact on the statewide Loss Of Load occurred. The report indicates that winter requirements of 75% and 92% of the summer peak load resulted for NYC and LI, respectively.

While this in no way reflects an exhaustive analysis of winter locational requirements, the results from this study suggest that some reduction in the winter requirement may be warranted and a consideration of seasonal requirements should be incorporated in future ICAP requirement studies. NYPA believes that having an ICAP requirement for summer and winter seasons based on the LSE's peak load for the respective season would send the proper ICAP price signal.

NYPA is sharing the study results in the attached report in an effort to begin a dialog which we hope will lead to a broader examination of locational requirements when the issue is revisited again next year. We would appreciate hearing the views of other market participants.

"Roy J. Shanker" <royjshanker@worldnet.att.net> writes to the NYISO_TECH_EXCHANGE Discussion List:

I agree with Mark. Further, in setting the baseline, the LOLP study obviously assumed an annual structure for maintenance scheduling and a lack of diversity in terms of outage rates for summer versus winter. These assumptions no longer are valid if the time step for planning becomes a capability period. Each reliability period would have to stand on its own, and you would have to entirely redo the assumptions about scheduled outages and come up with seasonal availabilities. My guess is that given the incentive to be around in the summer for the higher energy payments, these values should be highly skewed.

Finally, lets also just cut to the chase. Even if this study were correct in its current form, what obviously is going on is an attempt to "evade" 50% of the deficiency charge. Applying this type of argument on seasonal installed requirement to deficiency payments just doesn't fly. If you believe that the current values for the deficiency payments are "correct" to begin with, it would make sense to me to at minimum allocate the deficiency charges by the LOLP incurrence, e.g. if 90% of the annual LOLP is in the summer period, then 90% of the deficiency should probably follow this allocation. Remember, the incentive is to force people to build, the cost of being short ever really should stay the same, or you diminish the incentive and thus undercut the entire reliability structure.

"Mark Younger" <mdy@slater-consulting.com> writes to the NYISO_TECH_EXCHANGE Discussion List:

How do you get from an initial estimate of "75% and 92% of the summer peak load ... for NYC and LI, respectively" to "having an ICAP requirement for summer and winter seasons based on the LSE's peak load for the respective season would send the proper ICAP price signal." The summer and winter ICAP requirements are based upon the summer peak load. Basing the winter ICAP requirement on the winter peak load would be a substantial change in the ICAP market. If we are going to consider a change in this direction then we also have to apply most of the annual deficiency rate to the summer period.

"Datek Margin Call / 11/08/2000"

Sender	mailbot@datek.com
Recipients	['lcampbel@enron.com']
File	campbell-l/all_documents/859.

Dear Mr. LARRY CAMPBELL:

The equity in your Datek Online trading account has fallen below our margin maintenance requirements. This results in a 'margin maintenance call' that requires you to either make an immediate payment or to close out some of your portfolio. If your account is not restored to its required equity by three business days from today, portions of your portfolio may be liquidated. Furthermore, Datek Online reserves the right to take action at ANY time with or without notice if market conditions warrant.

Your current margin call is as follows:

Userid =CAMPB54792 \$1836.61

When funding your account, we strongly recommend that you send any payments by overnight delivery. Otherwise, your deposit may not be received in time to satisfy this call. Please make checks payable to Datek Online and please include your username or account number on the face of your check before mailing to...

iClearing LLC Attn: Margin Dept. 100 Wood Avenue South Iselin, NJ 08830-2716

If we can provide you with further information please contact the Datek Online Customer Support Team at 1-888-U2-Datek or 1-732-635-7500 or email margin@datek.com. Thank you.

Sincerely, Margin Department iClearing LLC Member NASD/SIPC

ACCOUNT NOTIFICATION: Margin email notice

Sender	accountinfo@datek.m0.net
Recipients	['lcampbel@enron.com']
File	campbell-l/all_documents/1548.

Dear Larry Campbell:

As a margin account holder, you know how important it is to receive information about your account in a quick and timely manner. One of the ways we notify customers about a margin call is with a letter, but unfortunately that letter often arrives too late for timely action. That's why we've decided to stop sending regular mail notification of margin calls to our customers.

E-mail is the fastest way for us to notify you about a margin call. We will continue to provide you with speedy e-mail notification, and are committed to steadily improving our already top-rated e-mail service. Please check your inbox regularly and make sure that the e-mail address we have on file for your account is current.

To update your e-mail address online, simply login to your account and select "Settings" from the Account Services pull-down menu. Then click "User Profile" and follow the directions to modify your e-mail address.

We'd like to remind you of your responsibility to remain aware of the status of your margin account at all times, and to be prepared to take action as soon as conditions warrant. Be fully aware that if at any time your account value falls to approximately 10% equity, or if market conditions warrant, we reserve the right to close out some or all of your positions with or without notice, at our sole discretion. For these reasons it is imperative that you monitor your account on a regular basis.

If you have any questions please send e-mail to support@datek.com or call Customer Support at 1-800-U2-DATEK. Please call 201-761-7500 if you are calling from outside of the United States.

Sincerely,

John J. Mullin President Datek Online Brokerage Services LLC

Koch South Texas pipeline data room questions and answers

Sender	larry.campbell@enron.com
Recipients	['randy.belyeu@enron.com', '=20', 'joe.richards@enron.com']
File	campbell-l/discussion_threads/318.

Randy, based upon the records review, this is the only issue that may be a= =20 problem. If a tank has been moved to another location, it would trigger=20 requirements which were enacted on the date of the relocation. For instance= e,=20 if a tank constructed prior to 1973 was moved in 1978, there would be=20 emissions control requirements placed on the tank as required by the 1978= =20 tank regulations. If the tank had remained at its original location, it=20 would be grandfathered with respect to emissions. However, because the tank= k=20 was relocated, it is looked upon as being a tank constructed in 1978 and=20 subject to the 1978 regulations and is no longer grandfathered.

I was not given this information during the records review, so I don't know = if=20 any of the tanks apply. If any of the tanks fit into the above scenario,= =20 EOTT or Koch will be looking at some major \$\$\$\$ to bring any subject tank= =20 into compliance. Generally speaking, the regulations and costs to comply= =20 increase as a function of date. =20

1. Q. Of the tanks listed on the spreadsheet, have any of the tanks been=20 relocated from its original construction locations? List the tank, date=20 moved and location moved to. A. Benevides Station Tank 6125 and Miranda Station Tank 28591 were relocated= ed=20 to those stations. Three Rivers Tanks 28508 and 28100 were relocated and= =20 re-erected at that station. Duval Station Tank 28052 and Miranda Station= =20 28045 were relocated and re-erected at those stations prior to Koch=01,s= =20 acquisition of those assets.

The Executive Committee of the New York State Reliability Council ("NYSRC") is posting this message to inform all interested parties of the ability to participate, on a "listen-only" basis, in the Open Session of the NYSRC Executive Committee's Meeting No. 20 scheduled for December 11, 2000, starting at 12:30P.M. Attached in Word format, and shown below is the Agenda for this Open Session. Those wishing to participate on a "listen-only" basis can call (304) 345-7506, and enter Participant Code 903712. Participants will be required to place their telephones on mute so as not to prevent other parties from participating. Those who plan on listening to the Open Session shall send me an email at "jcfleury@nyseg.com" with the names of the individuals & organizations participating.

Should you have any questions, please contact me by email at jcfleury@nyseg.com or by phone at (607) 762-4698.

Joseph C. Fleury Secretary, NYSRC Executive Committee

(See attached file: NYSRC Agenda Mtg#20 open.doc)

Agenda Items: Open Session 1. Introduction

2. NYS Assembly Statewide Reliability Study - G. Loehr

3. Reliability Rules Subcommittee ("RRS") - M. Sasson 3.1 Subcommittee Status Report & Discussion Items 3.2 Status of New/Revised Reliability Rules 3.3 Other RRS Issues

4. Installed Capacity Working Group ("ICWG") - M. Cordeiro 4.1 ICWG Status Report & Discussion Issues 4.2 2001 Statewide Installed Reserve Margin Study

5. Reliability Compliance Monitoring Subcommittee ("RCMS") - G. Loehr 5.1 Subcommittee Status Report & RCMS Discussion Issues 5.2 NYSRC Reliability Compliance Program Status Report

6. NYISO Studies - Status Report - NYISO Staff

Future Meetings:

#21 - January 11, 2001 - NYISO Office, Guilderland, NY - 9:30AM Open Session: Dial-In #: (304) 345-7506, Participant Code: 903712

#22 - February 8, 2000 - NPCC Offices, New York City, NY - 10:00AM Open Session: Dial-In #: (304) 345-7506, Participant Code: 903712 - NYSRC Agenda Mtg#20 open.doc

Announcement: Summer 2001 Reconfiguration Auctions of TCCs -

Sender	owner-nyiso_tech_exchange@lists.thebiz.net
Recipients	['marketrelations@nyiso.com']
File	campbell-l/discussion_threads/1276.

adesell@nyiso.com writes to the NYISO_TECH_EXCHANGE Discussion List:

An issue surfaced during the conduct of the current Spring 2001 TCC Auction related to import limit to New York from Hydro Quebec (HQ) . In one round of the Spring auction, bids were received requesting a large number of TCCs with a POI of the HQ Proxy bus. These bids, if awarded, would exceed the HQ import limit of 1200 MW used in the TCC auctions.

The 1200 MW HQ import limit was based on internal conversations within the NYISO. These conversations indicated that congestion differences between the HQ Proxy bus and internal New York buses would be produced in SCUC at the 1200 MW import level. One auction participant questioned the modeling of the HQ import limit. After further review, the NYSIO agreed that the HQ import limit used in the TCC auctions could be increased to 1500 MW, as long as the same SCUC operating policy for the HQ import was followed. This policy allows for a 1500 MW HQ import, if at least 300 MW of that import is due to wheel through transactions.

The ISO will implement this operating policy in the TCC auction as follows. TCC awarded from the HQ Proxy bus to internal New York buses will be limited to 1200 MW. Total TCC awards from the HQ Proxy bus will be limited to 1500 MW. TCCs awarded in the reverse direction (i.e., into the HQ Proxy bus) will net against those TCCs awarded in the opposite direction. Also, existing uses of the transmission system will be included. Existing uses include Grandfathered Rights, Grandfathered TCCs and TCCs awarded in previous auctions that have not expired.

To incorporate this operating policy in subsequent TCC auctions, the following bidding rule is being established:

For TCC bids from the HQ Proxy bus to an internal New York bus or zone and from an internal New York bus or zone to the HQ Proxy bus, PTID 61844 must be used for the POI or POW as appropriate.

For TCC bids that represent wheels through from the HQ Proxy bus to another external proxy bus (i.e., NE Proxy, OH Proxy, PJM Proxy) and from another external proxy bus to the HQ Proxy bus, PTID 23651 must be used as the POI or POW as appropriate.

These PTID designations will allow the NYISO to identify TCC bids and properly model those bids as they relate to the Hydro Quebec import limit in the TCC auction.

PTIDs 61844 and 23651 were chosen because the LBMPs and the individual components of the LBMPs in the Day-Ahead market are identical.

This new bidding opportunity in the TCC auctions will be allowed beginning with the May 2001 Reconfiguration Auction scheduled for April 23, 2001.

Redrock Permit Issue, Requested Information

Sender	larry.campbell@enron.com
Recipients	['william.kendrick@enron.com', 'joe.hartsoe@enron.com']
File	campbell-l/discussion_threads/445.

Joe, presented below is the first memo I sent out concerning the air permit issue:

[Yesterday evening I phoned both the state of Arizona (agency for stations 1 and 2) and Region 9 EPA (agency for stations 3 and 4) concerning the status of when the air permits would be issued by both agencies for the Redrock expansion. I was surprised to find out that both agencies stated a 2-4 month delay prior to issuance. They cited back log of other permits, public comment periods, and workload as being the main reasons. I am particularly disappointed because there were pre meetings with both agencies identifying what was to be included in each application package, and even after the applications were submitted in March of this year, each agency came back and asked for different information that from what was discussed at each meeting.

I have a call into the state of Arizona (construction is to begin at Station 2 and they have jurisdiction for this station) to see if we can initiate some construction activities such as laying pipe and building foundations prior to receiving the permit. I have been given these types of approvals from other agencies in the past, but these types of approvals are extremely narrow and restrictive. If this flies I am sure that they will require us to make sure the turbine is not brought on site until the permit has been issued. I know this will require written approval from the agency, but this may allow us to proceed on schedule and avoid any delays. Ill keep you apprised of this issue.]

I spoke with the ADEQ after our conference call and they directed me to another group (compliance) in the air permit section. They strongly suggested that I contact the compliance group before contacting Nancy Wrona, Director of the ADEQ. I left a message with the supervisor of the ADEQ compliance section, Kathy McConnell (?) 602-207-2328, but have not heard back from her. Either Bill Kendrick or I will be touching base with her again, tomorrow.

Arnold has given me the following list of construction items he would like to have the ADEQ grant us permission/waiver to do in leau of receiving the air permits:

all earthwork trench construction and piping tie ins all foundation and building construction installation of ancillary equipment

This list is probably too aggressive and falls out of what the agency may allow us to do.

The EPA contact for the Sta. 3 and 4 air permits: permit engineer Roger Cohn (415) 744-1238 Supervisor Geraldo Rios (415) 744-1259

The ADEQ contact for Sta. 1 and 2 air permit permit engineer Shudeish Mahadev (?) (602) 207-2323 Director Nancy Wrona

NYISO 2002 Corporate Goals

Sender	owner-nyiso_tech_exchange@lists.thebiz.net
Recipients	['janet.audunson@orionpowerny.com', 'tlr@dwgp.com']
File	campbell-l/notes_inbox/672.

As part of the 2002 Business Planning process for the NYISO, the Budget, Standards, and Performance Subcommittee (BS&P) has prepared the attached draft corporate goals for 2002 using the 2001 goals as a starting point.

As noted in the attached draft, some of the metrics on certain goals for 2002 have been modified and certain goals have been added or deleted. The BS&P is requesting input on this draft from all Market Participants. You can e-mail your comments to me at amatim@nimo.com. We need your comments by May 15 in order to finalize this draft as input to the internal NYISO Business Planning process which starts June 1.

If you have questions or comments you wish to discuss, you can call me on 315-460-2550.

Marty Amati Chair BS&P Subcommittee

Hi Larry,

Since it's been a month since we emailed you our list of recommendations, we wanted to check back with you and see if there is anything we can do to help you with your diamond buying decision? Our goal is to help you make an informed decision that you will be happy with for years to come. Remember, since we don't own these stones, we are your personal diamonds consultants who will work to find the very best diamond for you at a great price.

If you have any questions about diamonds or the diamond buying process please give Anne or me a call at the toll free number below or email us. We take calls until about 9:00 p.m. EST since we are dealing with customers and suppliers on the West Coast. We find that serious diamond buyers always want to call and visit with us so that we can better understand your needs and answer any of your questions. Email works great for shopping, but the telephone is the better way to conduct business for such an important purchase.

Looking forward to hearing from you soon!

P.S. If you have already purchased, please let us know in a reply to this message so we will know not to send any more follow up messages.

Denny Reinke - Vice President Diamond Source of Virginia, Inc. <http://www.DSOURCEVA.com> Phone: 804-360-7428
Fax: 804-360-1532 Toll Free: 888-477-8385

Our goal is to help you make an informed decision that you will be happy with for years to come. Remember, since we don't own these stones, we are your personal diamonds consultants who will work to find the very best diamond for you at a great price.

Since you have not responded to any of our emails these past 8 weeks, we assume you are no longer shopping for a diamond and will remove your name from our active customer list. We hope that if you are still shopping you will contact us so we can help you find a great diamond.

If you have any questions about diamonds or the diamond buying process please give Anne or me a call at the toll free number below or email us. We take calls until about 9:00 p.m. EST since we are dealing with customers and suppliers on the West Coast. We find that serious diamond buyers always want to call and visit with us so that we can better understand your needs and answer any of your questions. Email works great for shopping, but the telephone is the better way to conduct business for such an important purchase.

Looking forward to hearing from you soon!

Denny Reinke - Vice President Diamond Source of Virginia, Inc. <http://www.DSOURCEVA.com> Phone: 804-360-7428

File	campbell-l/discussion_threads/1022.

Dear larry,

Thanks for joining Ofoto! Your account has been credited with 25 FREE 4 x 6" prints. Whether you're into film or digital photography, Ofoto delivers the best prints you've ever seen right to your door.

Here are a few of the most popular ways to use Ofoto:

- Get FREE film processing and high-resolution scanning on your first two rolls
- Store all of your digital photos on a secure Web site at no charge
- Invite family and friends to view your online photo albums
- Order beautiful prints on premium Kodak paper 24 hours a day, 7 days a week

The next time you visit Ofoto at <http://www.ofoto.com> you'll need to log in using the email address and password you provided at registration.

Email address: lcampbel@enron.com

If you forget your password, go to: <http://www.ofoto.com> and click on the "Forgot your password?" link under the Sign In box.

Now, you can earn 10 free prints for each friend you refer to Ofoto. Refer 10 friends and get up to 100 free prints! Go to <http://www.ofoto.com/Tellafriend.jsp> to refer your friends.

If you have any questions about using Ofoto, just email us at service@ofoto.com. We'll be happy to help.

We hope you enjoy your prints from Ofoto!

Cheers,

James Joaquin President and CEO Ofoto, Inc

ET scheduler contact list	
Sender	timothy.hamilton@enron.com
Recipients	['gas.desk@enron.com', 'Louis' < louis.dicarlo@es.pge.com >, 'DiCarlo', 'Gordon', 'Oliphant']
File	campbell-I/et_contacts/1.

Please find attached below a list of PG&E Energy Trading scheduling contacts.

We have been advised that the schedulers can handle small volumetric changes and they will advise if you need to talk to a trader. The trader contacts (if needed) are as follows:

East - John Ed James - 713.371.6673 Midwest - Tom Dickey - 713.371.6163 West - Allen King - 713.371.6123

Both John and Tom will be leaving ET at the end of the summer. Allen is the only individual who will be transferring to the Bethesda, MD office.

Please advise with any questions. Thanks.

Tim

Diamond Source of Virginia - Holiday Alert

Sender	denny@dsourceva.com
Recipients	['lcampbel@enron.com']
File	campbell-l/notes_inbox/121.

Hi Larry,

We are sending this quick note to our diamond customers who are still shopping to let you know that the holiday rush has begun. If you are hoping to present your special gift before Christmas, be aware that while we can get diamonds in quickly the calendar is getting short for getting a custom mounting made. In another week it will become difficult to get diamonds quickly set in mounting. What normally takes 2-3 days suddenly turns into a week long process as the setters are buried with ring sizing, diamond setting and other jewelry preparation for the big gift giving days.

If you are planning on presenting your gift after Christmas, you'll have plenty of time but the supply of diamonds is as good now as it will be until early February. Unlike cars, TV sets and computers that come down in price when the snow falls or

following Christmas, we have yet to see diamond prices fall. They tend to keep going up year after year which is good if you own them, but a challenge if you are waiting to buy.

If you have any questions about diamonds or the diamond buying process please give Anne or me a call at the toll free number below or email us. We take calls until about 9:00 p.m. EST (Mon-Sat) since we are dealing with customers and suppliers on the West Coast. We find that serious diamond buyers always want to call and visit with us so that we can better understand your needs and answer any of your questions. Email works great for shopping, but the telephone is the better way to conduct business for such an important purchase.

Looking forward to hearing from you soon!

Mike Hogan <mhogan@cenhu To: jcox@nyiso.com d.com> cc: "Dahl, Curt" <cdahl@keyspanenergy.com> 07/30/2001
Subject: NYSRC ICAP WG MEETING ON AUG 2 02:01 PM

The ICAP Working Group of the New York State Reliability Council ("NYSRC") is posting this message to inform all interested parties of the ability participate, on a "listen-only" basis, in the NYSRC ICAP Working Group Conference Call No. 10 scheduled for August 2, 2001, starting at 9:00A.M. Attached in Word format is the Agenda for this meeting. The Working Group is an open meeting in accordance with NYSRC Policy No. 2, which is available of the NYSRC web site at "www.nysrc.org", on the "Policies" web page.

Those wishing to participate on a "listen-only" basis can call (608) 250-9281, and enter participant Code 132622, starting at 9:30 A.M. Participants will be required to place their telephones on mute so as not to prevent other parties from participating. Those who plan on listening to the meeting shall send an email to my attention at "mhogan@cenhud.com" with the names of the individuals and organizations participating.

Those who are not NYSRC ICAP WG Members or Alternate Members will be given an opportunity to comment at the end of each meeting, or earlier at the Chairman's invitation.

Should you have any questions, please contact me by email at mhogan@cenhud.com or by phone at (845) 486-5213.

Michael P. Hogan Secretary, NYSRC ICAP WG

Re: Hendrick Wink Tank Farm**Sender** larry.campbell@enron.com**Recipients** ['william_kendrick@enron.com', 'alison.campbell@enron.com', 'larry.fenstad@enron.com']**File** campbell-l/sent/115.

Alison, better send me what you have via fed-x or fax (505) 627-8172. I have spoken to Bill about this. We need to send a check to the agency to cover ourselves prior to the April 30 deadline. I beleive that EOTT is responsible for paying the fee. I have left a message with Larry Fensted and his associate Ruth Ann and expressed the need for the \$416.00 check by 4/1.

From: Alison Campbell@EOTT on 04/26/2001 10:52 AM CDT To: Larry Campbell/ET&S/Enron@ENRON cc: William_Kendrick@Enron.com@Eott

Subject: Re: Hendrick Wink Tank Farm

I didn't forget about you. I was trying to verify which facility you were asking about since there are several Hendrick and Wink facilities on my file list. I was able to verify that an EOTT "PLP" check in the amount of \$416.00 was cut on 10/29/99 to pay the FY 2000 Emissions Fee (9/1/99 - 8/31/00) for Hendrick/Wink Station (TNRCC Account # WM01910). However, there is no evidence of payment for FY 2001. I believe, though, that Craig Willoughby of ENTRIX did some work on emissions for at least one of the Hendrick facilities while he was working for EOTT last year. I left a message for him a couple of days ago but haven't heard from him yet. I think that whatever he put together is in the ETS file. I've left a message for Kerry Fields to check the ETS files for information. Bottom line: Looks like the invoice you have does need to be paid, but which company is responsible for this fee?

P.S. Would you like a copy of what I found?

Alison Campbell Fleet Operations Phone: (713) 993-5088 Fax: (713) 402-2842 Email: alison.campbell@eott.com

Larry Campbell@ENRON 04/25/2001 03:33 PM

To: Alison Campbell/Houston/Eott@Eott cc: William Kendrick/OTS/Enron@ENRON Subject: Hendrick Wink Tank Farm

Alison, have you found out anything about the above referenced? The deadline for submitting the FY 2001 emissions fee is April 30. The TNRCC can levee a fine on the facility if we dont provide them with some informaiton pretty fast. Your assistance in this will be appreciated.
